

Adding Areas

Add and customize areas (rooms or spaces) to estimates with dimensions, area types, surfaces, and automatic price calculations.

In PaintScout, you build estimates by adding areas — named spaces or rooms where work will be done (e.g., Bedroom, Office, East Wall, Porch). Each area holds dimensions and surfaces that drive automatic price calculations.

What is an area?

An area is a space or room where the work will be done, such as a Bedroom, Office, East Wall, or Porch.

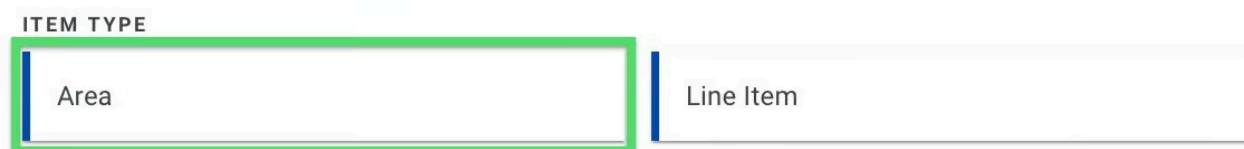

How do you add an area to an estimate?

1. On the estimate, click **Add Area or Line Item**

2. Select **Area**.

Create Area or Line Item

CANCEL

- Choose from your list of pre-built areas from your settings or create a custom area.

- **Personalize:** You have the flexibility to customize every field, including the name. Simply click on each box to make edits.
- **Add dimensions:** Input the dimensions of the area in the designated width, length, and height boxes. If you wish to override the automatically calculated linear or square footage, click the **customize dimensions** button. To revert to the default value, click the triangle icon.
- **Select an area type:** Choose **room** to calculate the space as if it has four walls, or **surface** for a single plane (e.g., the front side of a house). You can set the default type per estimate type in your settings.

5. Select the surfaces you want to paint. Choose a rate category (e.g., *Walls*), then pick a specific surface (e.g., *8 ft walls*). PaintScout calculates painting hours and price from the production rate and area dimensions. Click **+ Add Substrate** for more surfaces, then click **Add Area** when finished.
