

Adjust Surface Dimensions

Override area dimensions on individual surfaces by editing length, width, height or switching to direct sqft/lft input.

PaintScout lets you override area dimensions on individual surfaces so each surface can have its own measurements without affecting other surfaces in the same area.

Surfaces automatically inherit dimensions from their parent area. Override these by opening the surface and editing the length, width, and height.

INTERNAL LABEL		CLIENT LABEL
Walls		
LENGTH (FT)	WIDTH (FT)	HEIGHT (FT)
20 	10 	8
Default Value: 17	Default Value: 15	

How do you switch to direct sqft or lft input?

1. To input a direct square footage or linear footage amount instead of length/width/height, click the **switch to sqft/lft** button on the surface.

 If you don't see the switch button, [contact us](#)  to have it enabled.
