

Saving & Syncing

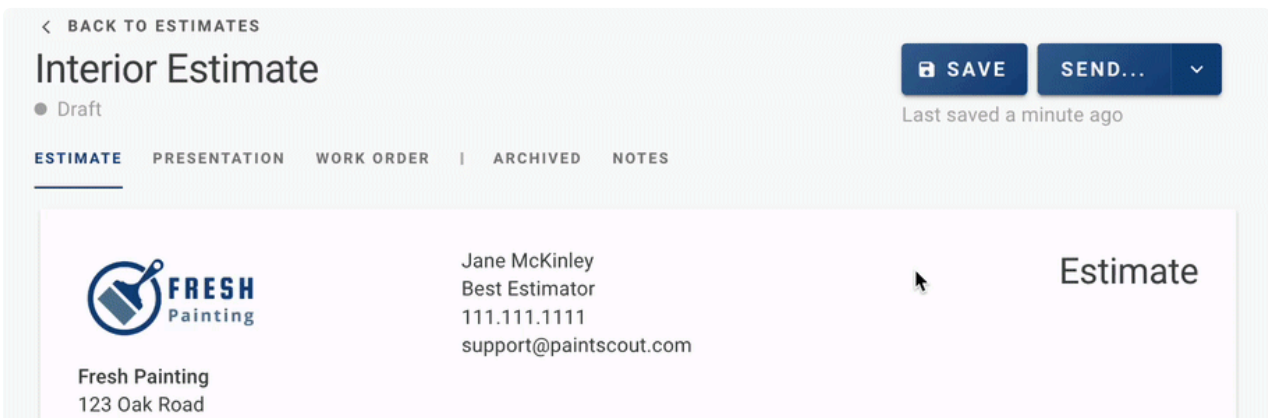

Learn how to save and sync estimates to the cloud in PaintScout to prevent data loss and keep your work updated.

PaintScout does not auto-save estimates. Press the **Save** button regularly while working to sync your changes to the cloud and prevent data loss.

You will find the save button on the top right of your estimate when working on a desktop or on the bottom right when using a mobile device.

While your changes are syncing to the system you may see the save button loading.

If you try and leave an estimate before saving, we'll do our best to remind you! You may see this message when that happens:

app.paintscout.com says

You have unsaved changes, are you sure you want to leave this page?

Cancel

OK

If you have accidentally closed your browser or powered down your device without saving you will be met with this message and you will be given the option to select **yes** and save the changes or **discard the changes**.

Unsaved Estimate Found

from 12/15/2023 1:44:48pm

This happens when the page unexpectedly closes without a save, or the same estimate is opened in multiple tabs.

Would you like to save and continue where you left off?
